

CURB VIEW CAMERA

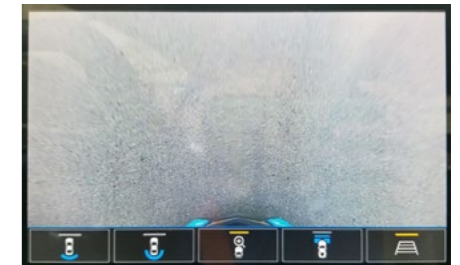

Helps Protect Vehicles When Parking

OVERVIEW

Provides a view of the scene immediately ahead of the vehicle on the infotainment display to help drivers avoid nearby objects, such as curbs, poles and parked vehicles at low speeds.

HOW IT WORKS

- ◆ If equipped, the vehicle's camera system uses two digital forward-facing cameras (one camera on each side of the front fascia), in addition to a rear digital camera and digital video processing module. Together, they provide different views of the front and rear of the vehicle. Four views are shown in the centerstack:
 - Overhead view
 - Provides a top-down view of the scene immediately ahead of the front bumper
 - Curb view
 - Merges front cameras with overhead view to display area directly in front of the vehicle
 - Rear camera view
 - Displays rear view to assist with parking and tight maneuvers
 - Rear junction view
 - Wide-angle view from the rear camera
- ◆ Curb View Camera automatically displays in the infotainment system¹ when shifting from REVERSE to a forward gear at speeds slower than 7 miles per hour
- ◆ The driver can also press the Curb View button above the mode selector button at speeds slower than 7 miles per hour to see the Curb View Camera image

FAQ

What would keep Curb View Camera from working as expected?

If the camera lens is obscured or not properly cleaned, the system might not work properly.

Safety or driver assistance features are no substitute for the driver's responsibility to operate the vehicle in a safe manner. The driver should remain attentive to traffic, surroundings and road conditions at all times. Visibility, weather and road conditions may affect feature performance. Read the vehicle's Owner's Manual for more important feature limitations and information.

¹ Functionality varies by model.
