

CUSTOMER BENEFIT

- Designed to help protect their front splitter when pulling into a driveway, going over speed bumps or up and down ramps

FRONT LIFT SYSTEM

An easy way to raise and lower the front-end of a vehicle

OVERVIEW

The Front Lift System, if equipped, will raise the front-end of a vehicle to provide customers with approximately two inches of increased ground clearance.

HOW IT WORKS

Customers use the Front Lift System to raise the front of their vehicle at speeds up to 24 mph. The system can be lowered manually or it will lower the vehicle automatically based on certain operating conditions.

- ♦ To raise the vehicle, the customer should push the FRONT LIFT SYSTEM button  located below the infotainment system¹ screen while driving 24 mph or slower
- ♦ The Driver Information Center (DIC) will display a message that says “Vehicle Raising”
- ♦ The front will stay in a raised position as long as the driver does not exceed 24 mph. If the driver reaches speeds over 24 mph, the front will automatically lower
- ♦ To manually lower the vehicle, the customer can push the FRONT LIFT SYSTEM button . When lowering, the DIC will display a message that says “Vehicle Lowering”
- ♦ If the vehicle is turned off when in the raised position, it will automatically lower
- ♦ If a vehicle door is opened during lowering, the movement will pause and then continue to lower slowly after a period of time

Storing Raised Locations Using GPS

The Front Lift System can also be programmed to raise or lower at specific points on a driving route using GPS.

- ♦ When the FRONT LIFT SYSTEM button  is pushed, a notice will appear on the DIC asking if the customer would like to “Remember” the location
- ♦ The customer can then push the left button on the steering wheel to store the location
- ♦ The DIC will display a message that reads “Auto Lift Location Remembered”
- ♦ Once stored, the vehicle will automatically raise when approaching the stored location, and the vehicle will display a message on the DIC that reads, “Vehicle Raising Due to Location.” The customer can either delete (this location) or dismiss the message
- ♦ The vehicle will lower automatically after it is a sufficient distance from the stored location

Safety or driver assistance features are no substitute for the driver’s responsibility to operate the vehicle in a safe manner. The driver should remain attentive to traffic, surroundings and road conditions at all times. Visibility, weather and road conditions may affect feature performance. Read the vehicle’s Owner’s Manual for more important feature limitations and information.

¹ Functionality varies by model. Full functionality requires compatible Bluetooth and smartphone, and USB connectivity for some devices.

For GM dealership personnel use only. Not intended for advertising purposes. Product information is preliminary and reflects approved content at time of publishing.

FRONT LIFT SYSTEM

USAGE TIPS

- ◆ Storing locations using Navigation² requires an accurate GPS signal
- ◆ The DIC may display the message “Lift System Unavailable” if the following occur:
 - The doors are ajar
 - The front storage is ajar
 - The customer is driving over 24 mph
 - A customer attempts to raise the vehicle 4 times within a short time
- ◆ Do not service a vehicle while it is in the raised position. Lower the front before servicing
- ◆ The Front Lift System can save several locations in a row when the customer pushes the button to “Remember” the first time they go over the speed bumps. The system will string the locations together and will stay raised as long as the vehicle does not exceed 24 mph

FAQs

Does the customer need to be in Tour mode in order to use the Front Lift System?

No. The Front Lift System can be used in Tour, Sport or Track modes.

How does the customer delete all previously saved locations?

The customer can remove all previously saved locations through the infotainment system by selecting:

Home > Settings > System > Reset to Factory Settings > Reset Vehicle Settings
